

AFROLEAD

MINING COMPANY LIMITED

**Exploration.
Mining. Processing.**

COMPANY PROFILE / NIGERIA

Growing with Nigeria.

Our vision is to become a leading mining company and help Nigeria realise more of the value of its mineral resources.

A stronger Nigerian mining sector

Contribute to a future in which Nigeria has a stronger place in mining through responsible mineral development and long-term investment.

More value within Nigeria

Advance mining and mineral processing together, with the ambition to retain more mineral value and develop industrial capability within the country.

Growth with purpose

Build on our production activities and project portfolio while pursuing skills development, constructive community relationships and responsible operations.

Mining today. Building for tomorrow.

AFROLEAD Mining Company Limited is a Nigerian mining company with production operations and operating sites. Our business spans exploration, mining and mineral processing.

An operating mining business

Our company combines current production activities with exploration and project development. Mining is an active part of our business, alongside the development of our wider portfolio.

A wider mineral portfolio

Our documented exploration ground covers 106.6 km² across Nasarawa, Plateau and Taraba. These exploration areas are distinct from our operating footprint and are at differing development stages.

A long-term Nigerian commitment

We aim to grow our business while contributing to Nigeria's mining future through mineral development, processing and local value addition.

Our business. Across the mining cycle.

Exploration, production and processing form the connected core of AFROLEAD's mining business.

Mineral exploration

Mapping, field investigation and sampling inform our understanding of mineral targets and the development of our exploration portfolio.

Mineral processing

Processing is part of our business scope, including tin and gold treatment and processing-plant development.

Mining & production

AFROLEAD has active production operations and operating sites. Mining and mineral production form part of our present business.

Project evaluation & development

Geological evidence, recovery requirements and practical conditions guide the advancement of our mineral projects.

Mining and mineral value.

Our business connects mining and production with mineral processing, while our development strategy seeks to build more value within Nigeria.

Current production activities

AFROLEAD operates mining sites and undertakes production activities. Alongside these operations, we are advancing exploration targets within our wider portfolio.

Processing as part of the business

Our processing scope includes tin and gold treatment and plant development, linking mineral extraction with the recovery of value.

Project-specific development

For the Nasarawa tin target, representative sampling and recovery work will guide the processing route and plant scope. This target remains at the exploration stage.

The people behind AFROLEAD.

The company brings together mining-sector experience and a broader commercial-business background, with direct access to its two principals.

Ahmed Elnemair | Chief Executive Officer

Previously chaired African Dragon Global Resources, a Nigerian business focused on lead mining. His professional background also includes gold mining with RIDA Group.

Hussein Elhussein | Chairman

His wider business background includes the Boulevard, Net Concierge and Nuskine Elite Team businesses identified by management. These are separate businesses from AFROLEAD.

DIRECT ACCESS. CLEAR CONVERSATIONS.

Experience behind our operations.

Management's experience in lead mining, gold mining and commercial enterprise informs AFROLEAD's operations and long-term direction.

African Dragon | Lead mining

CEO Ahmed Elnemair previously chaired African Dragon Global Resources, a Nigerian resources business with a primary focus on lead mining.

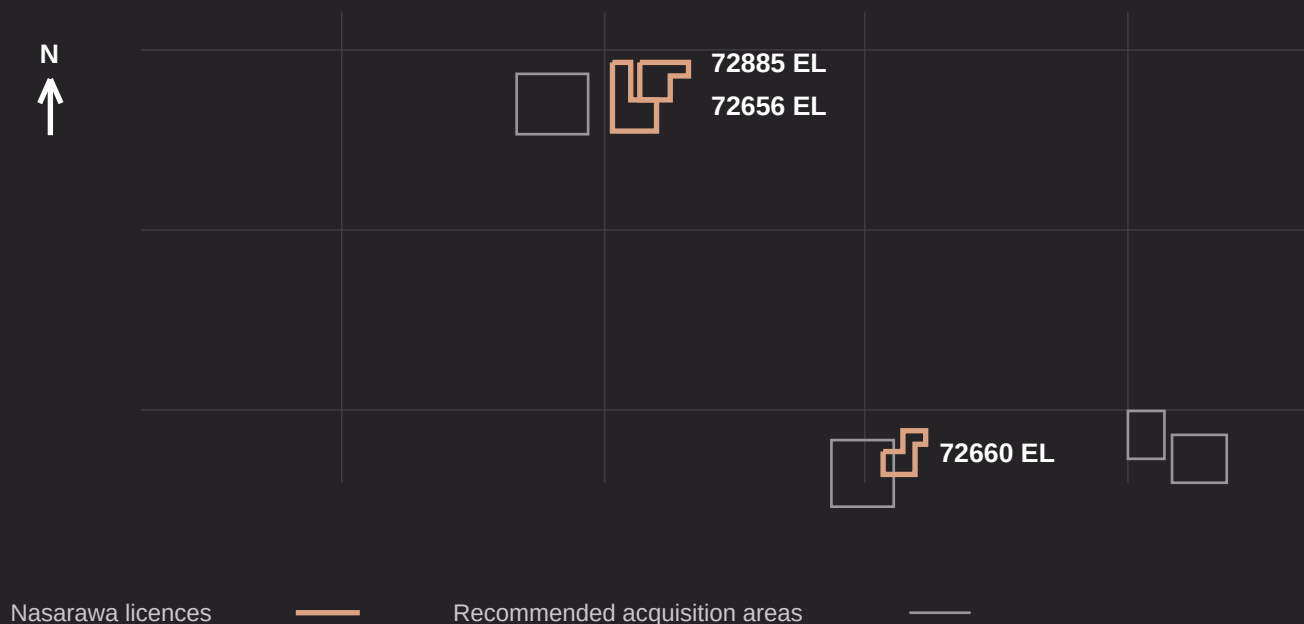

RIDA Group | Gold background

Ahmed's professional background includes gold mining with RIDA Group. Group website: www.ridagroup.com.

AFROLEAD | Today

AFROLEAD combines current mining and production activities with the development of its Nigerian portfolio. Prior-company experience informs our business; historical assets remain distinct.

NASARAWA / LICENCE PORTFOLIO

Location schematic redrawn from TML. Approximate outlines; not a cadastral survey.
The separate Plateau / Taraba licence is outside this map.

A 106.6 km² documented footprint

Four title areas across Nasarawa, Plateau and Taraba. These figures describe document areas, not mineral resources; current title standing requires verification.

72885 EL | 20 km²

Nasarawa-Eggon. Current priority: tin workings and the AB065 base-metal target.

72656 EL | 20 km²

Lafia / Nasarawa-Eggon. Additional exploration ground with more limited surface evidence.

72660 EL | 15.2 km²

Keana, Nasarawa. Earlier-stage exploration; geological coverage remains limited.

69542 EL | 51.4 km²

Kanam, Wase and Karim-Lamido, Plateau / Taraba. Licence minerals include copper, lead, zinc and monazite. The map shows Nasarawa only.

A priority for the next programme

Documented artisanal tin workings within EL-72885 provide a tangible starting point for systematic exploration and processing evaluation.

What has been observed

Workings extend along the foot-slope of Younger Granite terrain. TML interprets the recovered heavy-mineral fraction as cassiterite-dominated.

What the evidence supports

Mapping and preliminary concentrate screening justify follow-up work. Concentrate readings are not deposit grades; laboratory verification and representative sampling are required.

The development objective

Define mineralised thickness, distribution and recovery characteristics, then evaluate a tin-processing route supported by the results.

A second exploration pathway

AB065 in EL-72885 contains exposed veins, altered wall rock and a coincident copper-lead-zinc response in samples collected by TML.

Direct evidence

The accessible surface samples support the presence of a polymetallic system. They do not establish continuity or an economic deposit.

A focused follow-up

Verify results in a laboratory and investigate potential structural extensions through mapping and systematic geochemistry.

Practical development

Nearby residential areas create access and community constraints. Extension targets and land access must be evaluated before more intensive work.

Gold mining and processing.

Gold is part of AFROLEAD's mining and processing business scope, supported by management's gold-mining background with RIDA Group.

Our mineral direction

Gold sits alongside tin and lead in our wider mining direction, connecting exploration, mining and mineral processing.

Processing and value addition

Gold treatment and processing-plant development form part of our business scope. Ore characteristics and recovery requirements shape each project.

Development discipline

Project-specific geological and technical work guides development. No gold resource estimate, plant capacity or production volume is presented in this profile.

Growing our business. Advancing Nigeria.

Our strategy builds on current production operations while advancing our portfolio and pursuing greater mineral value addition in Nigeria.

OUR GROWTH PRIORITIES

01

Build on our operating foundation

Develop the technical and operating capabilities that support our mining and production activities.

02

Advance our mineral portfolio

Progress exploration targets through verification, representative sampling and recovery evaluation, with decisions guided by the evidence.

03

Contribute to Nigeria's mining future

Pursue processing development, skills and strategic relationships that support a stronger domestic mining industry over the long term.

Responsible development

Environmental care, community relationships and safe working practices are principles that guide our approach to mineral development.

Community engagement

Coordinate land access and local engagement, taking account of agriculture, seasonal activity and neighbouring settlements.

Health & safety

Make safe field access, ground conditions and appropriate operating procedures part of project planning and execution.

Environmental responsibility

Address water, waste, disturbance and rehabilitation requirements as the mining and processing scope develops.

Partners in long-term growth.

Our strategic relationships support the growth of AFROLEAD's mining business and its ambition to contribute to Nigeria's mineral-sector development.

Investment in our development

Explore participation in defined stages of our portfolio development, supported by technical review and an agreed programme.

Technical and industrial capability

Build collaborations that support mining, processing and the capabilities needed for long-term growth.

Shared direction

Align around responsible operations, local value addition and clear project objectives. Commercial participation is agreed for each opportunity.
